Recessed luminaire delivered with separate control gear	<ul style="list-style-type: none"> - Complete cord anchorage - Sub clause 5.3.5 - Separate control gear 	OSM/LUM-ETF5	2019 ETICS Plenary Meeting
Question			
<p>A recessed luminaire is provided with a fixed connected cable/cord between lamp house and control gear. The wiring passes out of the luminaire more than 80 mm. In this case we need a cord anchorage according to § 5.2.10. In the mounting instruction there is an advice: "only for closed ceiling systems". For such a construction do we need a complete cord anchorage according to the standard?</p>			
Decision			
<p>According to § 5.3.5, we need a complete cord anchorage.</p>			
Explanatory notes			
<p>An advice concerning closed ceiling systems cannot be accepted. Closed ceiling systems are not defined in any way.</p>
